EDUCATION

University of California, Berkeley

Graduated August 2024

Bachelor of Arts in Computer Science

Relevant Courses: Data Structures, Advanced Computer Architecture and Engineering, Efficient Algorithms

WORK EXPERIENCE

IT Intern | Tessellations School | Cupertino, CA

March 2026 – Present

- Engineered an automated ETL pipeline to transfer fiscal year-to-date financial data from QuickBooks into Google Sheets, with custom filtering/formatting and daily refresh.
- Developed a Google Apps Script program to run scheduled, server-side data pulls and sync updates across spreadsheets, eliminating manual data entry.
- Provisioned 48+ MacBooks, Chromebooks, and iPads for students and staff following security compliance standards.
- Provided front-line troubleshooting for Wi-Fi, projector, router, and general device issues.

Research Staff | Skywalk Inc. | Menlo Park, CA

October 2025 – Present

- User tested iOS and macOS app across 74 iterations. Documented 130 bugs (56 critical) and collaborated with engineering team produce fixes.
- Coordinated 587 research participants through full study lifecycle, conducting interviews, scheduling sessions, and maintaining comprehensive documentation in Jira, Linear, and Excel.
- Processed 933 hours of audio data for ML voice isolation model development, performing JSON validation and Audacity waveform analysis to ensure dataset integrity.
- Produced daily QA reports for data collection team, flagging urgent firmware and data collection issues, then verifying fixes through systematic follow-up testing.

Data Insights Intern | 2nd Watch | Chicago, IL (Remote)

June 2023 – August 2023

- Automated client ETL pipeline for SQL Server data ingestion using Python, reducing load time by 72% and enhancing performance for downstream analytics.
- Engineered serverless provisioning solution using Python and AWS Lambda to automatically generate IAM roles and resources from client credentials, eliminating manual configuration overhead.
- Built and deployed interactive hiring analytics dashboard in Power BI using DAX to track recruitment trends and referral bonus payouts, with automated data refresh via REST API integration.
- Authored internal documentation on ETL pipeline optimization strategies and development workflows.

IT Technician and Training Lead | UC Berkeley IT | Berkeley, CA

January 2022 – December 2022

- Led training program for 25+ new technicians, developing standardized curriculum on security protocols, ServiceNow workflows, and Active Directory administration.
- Maintained comprehensive documentation for departmental systems.
- Resolved 10-30 support tickets daily via ServiceNow, supporting students and faculty with device troubleshooting.

PROJECTS

PintOS Operating System | C, Docker, RISC-V Assembly, Operating Systems

- Collaborated with team members to extend a bare-bones OS in C with ELF executable loading, a small syscall interface for process control and file system methods, a strict priority scheduler with priority donation for deadlock avoidance and multithreading capabilities, alongside a conditional variable based buffer cache for speeding up I/O and an extensible file system with sub-directories constructed with inodes.

Political Candidate ActionMap | Ruby on Rails, HTML, JavaScript, Agile, RESTful API

- Collaborated with 1 team member to develop and deploy full-stack web application that allows users to search for political candidates in a U.S. state or county. Users can aggregate, view, and share related news articles. Implemented in a RESTful application programming interface using Ruby on Rails with SQL and ActiveRecord ORM (relational database tool) following Agile life cycle and test-driven development. Tests written with Capybara and Cucumber.

SKILLS

- Java, Python, C, SQL, Ruby on Rails, Git, GDB, HTML, CSS, JavaScript
